Website health report

https://oldev.site/ | 2026-11-02 03:53:32 UTC

75 / 100 (C)

oldev.site scored 75 out of 100, grade C. The strongest area is Email authentication at 100 and the weakest is Security headers at 33. There are 6 items to fix. Start here: Send Strict-Transport-Security with a max-age of at least 15552000 once HTTPS is stable.

Scores by category

Security headers	33
Search basics	100
TLS certificate	100
Email authentication	100

Ranked fix list

1	High	**Strict-Transport-Security header** Send Strict-Transport-Security with a max-age of at least 15552000 once HTTPS is stable. Header is missing.
2	Medium	**Content-Security-Policy header** Start a Content-Security-Policy in report-only mode, review it, then enforce it. Header is missing.
3	Medium	**Clickjacking protection** Send X-Frame-Options: SAMEORIGIN or a frame-ancestors directive. Neither X-Frame-Options nor frame-ancestors is set.
4	Medium	**X-Content-Type-Options header** Send X-Content-Type-Options: nosniff. Header is missing.
5	Low	**Permissions-Policy header** Send a Permissions-Policy that turns off browser features the site does not use. Header is missing.
6	Low	**Referrer-Policy header** Send Referrer-Policy: strict-origin-when-cross-origin. Header is missing.

Passive checks only. This report is not a security audit.
